DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to the rejected claims have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

Claims 7-10 are allowed.

Claims 3-5,13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

Claims 1,2,6,11,12,16-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over APA in view of Omata et al, Kanda et al, or Neu. APA is the apparatus discussed on pages 2-4 of this application. This includes a pneumatic feed line that has a problem of clumped material. Each of the secondary references show pneumatic feed lines having diverters which break up material in the feed line to help promote material flow. In order to prevent clumping from hindering material flow, it would have been obvious for one of ordinary skill in the art to modify APA by placing diverters in the feed line to break up the clumped material, taught to be desirable by each of the secondary references. The remaining limitations would then have been obvious design choices only. For example, the use of air vents to relieve pressure in a pipe is well known in the art and of no patentable merit.
